

Pizza Pro Analytics: Business Insights and Recommendations Report

1. Executive Summary

Pizza Pro Analytics was developed to evaluate the sales, product, customer, and location performance of Pizza Pro. The analysis shows that the business generated \$824,320 in total revenue from 48,620 orders, with 50,084 pizzas sold across 1,000 customers. The average order value is approximately \$17, while average revenue per customer is approximately \$824.

Overall, the business shows strong sales activity, broad customer engagement, and clear product leaders. However, the analysis also highlights important opportunities around product optimisation, customer retention, regional marketing, and operational planning.

The strongest revenue-generating pizzas are mainly Chicken-based pizzas, especially Thai Chicken Pizza, Barbecue Chicken Pizza, and California Chicken Pizza. In contrast, products such as Brie Carre Pizza, Green Garden Pizza, Spinach Pesto Pizza, and Mediterranean Pizza appear among the lowest-performing pizzas by revenue or quantity ordered.

Customer analysis shows a balanced gender distribution, with female customers representing 46%, male customers 44.2%, and others/unknown 9.8%. Customer location is concentrated mainly in the East Coast, with additional presence in the Midwest and California.

2. Overall Business Performance

The executive dashboard shows that Pizza Pro has achieved a strong overall performance.

Metric	Value
Total Revenue	\$824,320
Total Orders	48,620
Total Pizzas Sold	50,084
Total Customers	1,000
Average Order Value	\$17
Average Revenue per Customer	\$824

Key Insight

Pizza Pro generated strong sales volume, with about 50,000 pizzas sold across the reporting period. The average order value of \$17 suggests that many customers are likely purchasing one pizza or a small order at a time. This creates an opportunity to increase basket size through bundle deals, meal combinations, drinks, sides, and upselling strategies.

The business is already generating good transaction volume, but revenue growth should not depend only on attracting new customers. Pizza Pro can increase profitability by encouraging existing customers to spend slightly more per order.

Recommendation

Pizza Pro should introduce meal bundles, such as:

- Pizza + drink combo
- Family meal deals
- Two-pizza discount offers
- Weekend party bundles
- Add-on promotions for sides or desserts

Even a small increase in average order value from \$17 to \$20 could have a major impact across more than 48,000 orders.

3. Sales Trend Analysis

The monthly sales trend shows that revenue remained stable across the year, with monthly sales generally ranging between approximately \$64K and \$73K. Revenue appears strongest around January and July, while lower points appear around September and October.

Key Insight

Sales performance is consistent across the year, but some months perform better than others. This suggests possible seasonal changes, campaign gaps, customer behaviour shifts, or operational issues affecting sales.

A drop in monthly revenue could affect stock planning, staffing, and cash flow. If weaker months are predictable, the business can prepare promotional activities in advance.

Recommendation

Pizza Pro should create a monthly promotion calendar. For example:

Period	Recommended Action
High-performing months	Push premium pizzas and bundles
Low-performing months	• Offer discounts, loyalty points, or limited-time deals • Investigate whether the drop is due to demand, marketing, or stock availability

4. Product Performance Analysis

4.1 Top Revenue Pizzas

The top revenue-generating pizzas are:

Rank	Pizza	Revenue
1	The Thai Chicken Pizza	\$43K
2	The Barbecue Chicken Pizza	\$43K
3	The California Chicken Pizza	\$41K
4	The Classic Deluxe Pizza	\$38K
5	The Southwest Chicken Pizza	\$37K

Key Insight

The top 3 revenue-generating pizzas are all Chicken pizzas. This is a strong signal that Chicken-based pizzas are highly valuable to the business, not only in terms of customer demand but also in revenue contribution.

Pizza Pro should treat Chicken pizzas as a major product strength. These pizzas are likely popular, profitable, and attractive to customers. They should be used as anchor products in marketing campaigns.

Recommendation

Pizza Pro should aggressively promote its top Chicken pizzas through:

- “Best Seller” labels on the menu
- Chicken pizza combo deals
- Social media promotions
- Loyalty rewards for repeat purchases
- Limited-time Chicken pizza bundles
- Featured placement on online ordering platforms

Example campaign:

Chicken Lovers Deal: Choose any two premium Chicken pizzas and get a discounted side or drink.

4.2 Bottom Revenue Pizzas

The lowest revenue-generating pizzas are:

Pizza	Revenue
The Spinach Pesto Pizza	\$16K
The Mediterranean Pizza	\$15K
The Spinach Supreme Pizza	\$15K
The Green Garden Pizza	\$14.K
The Brie Carre Pizza	\$12K

Key Insight

The Brie Carre Pizza is the weakest performer by revenue at approximately \$12K. Green Garden, Spinach Pesto, Spinach Supreme, and Mediterranean pizzas also generate much lower revenue compared with the top products.

Low revenue does not always mean a product should be removed immediately. It may mean the product has low visibility, limited appeal, poor pricing, weak promotion, or a niche customer base.

Recommendation

Pizza Pro should conduct a product review for the bottom-performing pizzas.

Recommended actions:

Product Issue	Possible Action
Low visibility	Place the pizza higher on the menu
Low customer interest	Run a limited-time discount
Pricing problem	Compare price with similar pizzas
Weak flavour appeal	Review ingredients or recipe
Consistent underperformance	Consider removing or replacing the item

The Brie Carre Pizza should be reviewed first because it has the lowest revenue and also appears among the least ordered pizzas.

5. Product Demand Analysis

5.1 Most Ordered Pizzas

The most ordered pizzas are:

Pizza	Quantity Ordered
The Classic Deluxe Pizza	2.4K
The Barbecue Chicken Pizza	2.4K
The Thai Chicken Pizza	2.3K
The California Chicken Pizza	2.3K
The Southwest Chicken Pizza	1.9K

Key Insight

Classic Deluxe Pizza is the most ordered pizza, while Barbecue Chicken, Thai Chicken, and California Chicken also show strong demand. This confirms that the top revenue pizzas are also among the most ordered pizzas.

These products are both popular and financially valuable. They should be protected from stock shortages and prioritised in menu planning.

Recommendation

Pizza Pro should ensure consistent availability of ingredients for:

- Classic Deluxe Pizza
- Barbecue Chicken Pizza
- Thai Chicken Pizza
- California Chicken Pizza
- The Southwest Chicken Pizza

Stock planning should prioritise ingredients used in these high-demand pizzas because shortages could directly reduce revenue.

5.2 Least Ordered Pizzas

The least ordered pizzas are:

Pizza	Quantity Ordered
The Green Garden Pizza	987
The Spinach Pesto Pizza	957
The Spinach Supreme Pizza	940
The Mediterranean Pizza	923
The Brie Carre Pizza	480

Key Insight

The Brie Carre Pizza is the least ordered pizza, with only 480 orders. This is significantly lower than the top ordered pizzas, which reach around 2.3K–2.4K orders.

The demand gap between the top and bottom pizzas is very large. The best-selling pizzas are ordered about five times more than the Brie Carre Pizza.

Recommendation

Pizza Pro should decide whether the Brie Carre Pizza is worth keeping on the menu. Before removing it, the business should test:

- A temporary price reduction
- A new product description
- A recipe improvement
- A bundle offer
- A customer feedback survey

If sales remain low after testing, discontinuing or replacing the Brie Carre Pizza may improve menu efficiency.

6. Customer Analysis

6.1 Customer Base Overview

Pizza Pro has:

Metric	Value
Total Customers	1,000
Average Revenue per Customer	\$824

Key Insight

The customer base is relatively small compared with the total number of orders. This suggests repeat purchasing behaviour, where customers are buying multiple times.

Repeat customers are valuable because they cost less to retain than acquiring new customers. Pizza Pro should focus on retention as well as customer acquisition.

Recommendation

Pizza Pro should introduce a structured customer loyalty programme, such as:

- Earn points per order
- Free pizza after several purchases
- Birthday or anniversary discount
- Exclusive deals for repeat customers
- VIP rewards for top spenders

6.2 Top Customers by Revenue

The top customers each generated over \$1,100 in revenue. Examples include:

Customer	Revenue
Djokic Torry	\$4,035
Muscroft Ernesto	\$3,224
Cullnean Loleta	\$1,537
Yarr Fanni	\$1,216
Marusik Rosabelle	\$1,192

Key Insight

The top customers are high-value customers and should not be treated the same as one-time or low-spending customers.

These customers are already loyal and profitable. Losing them could affect revenue, while retaining them could increase lifetime value.

Recommendation

Pizza Pro should create a VIP customer segment for top spenders. Possible VIP benefits:

- Exclusive discounts
- Early access to new menu items
- Free delivery after a spending threshold
- Personalised offers based on previous purchases
- “Thank you” reward vouchers

Example:

Customers who spend over \$1,000 annually could receive a VIP Pizza Pro Rewards Card.

7. Gender Distribution Analysis

Customer gender distribution:

Gender	Share
Female	46%
Male	44.2%
Others/Unknown	9.8%

Key Insight

Pizza Pro has a balanced gender distribution, with female and male customers almost equally represented.

The business should avoid overly narrow gender-focused campaigns because its product appeals broadly across customer groups.

Recommendation

Marketing should be inclusive and focused on behaviour, location, and product preference rather than only gender.

Better segmentation approaches:

- Frequent customers
- High-value customers
- Low-engagement customers
- Customers by location
- Customers by preferred pizza type
- Customers by order time

The Others/Unknown segment should also be handled carefully. It may include customers who did not provide gender data, businesses, group orders, or customers who selected another identity category.

8. Location and Regional Analysis

8.1 Customer Location Distribution

The customer map shows that the highest concentration of customers is on the East Coast of the United States, especially around the Northeast and Mid-Atlantic regions. There are also visible customer clusters in the Midwest and California. The Central US and Mountain West regions show fewer and smaller customer clusters.

Key Insight

Pizza Pro has a strong customer base in the East Coast, with additional pockets of demand in California and parts of the Midwest. Some regions appear underdeveloped, especially central and mountain areas.

The business should not apply one marketing strategy equally across all locations. High-density customer areas and low-density regions need different strategies.

Recommendation

For high-density regions:

- Strengthen retention campaigns
- Offer loyalty rewards
- Promote premium products
- Use targeted email or app campaigns

For low-density regions:

- Run awareness campaigns
- Offer first-order discounts
- Test delivery partnerships
- Promote best-selling pizzas as entry products

8.2 Revenue Distribution by State

The revenue map indicates that some states contribute more strongly to revenue. In the dashboard, Texas, California, and Florida are identified as important revenue-driving states.

Key Insight

Revenue performance appears concentrated in selected high-value states rather than evenly spread across the country.

High-revenue states should be prioritised for marketing investment because they already show strong demand and are likely to produce better returns.

Recommendation

Pizza Pro should use a state-level marketing strategy:

State Type	Strategy
High-revenue states	Increase promotions and loyalty offers
Medium-revenue states	Run targeted product campaigns
Low-revenue states	Test introductory discounts and local advertising
Sparse customer regions	Assess whether expansion is commercially viable

9. Operational Analysis

The order distribution by day and hour shows that demand is strongest around the middle of the day, especially around 11 AM to 1 PM. There is also evidence of activity during evening periods, especially toward the end of the week.

Key Insight

Peak ordering periods are concentrated around lunch hours, with additional demand during Friday and Saturday evening periods.

If staffing, kitchen preparation, and delivery capacity are not aligned with demand, customers may experience delays, poor service, or cancelled orders.

Recommendation

Pizza Pro should optimise staffing and stock around peak order times.

Recommended operational actions:

- Increase kitchen staff between 11 AM and 1 PM
- Prepare popular ingredients before peak periods
- Ensure delivery capacity is available during lunch and weekend evenings
- Use off-peak discounts during early mornings and late nights
- Monitor peak-hour order fulfilment time

Example action:

Schedule more staff and prepare high-demand pizza ingredients before lunchtime to reduce waiting time and improve customer satisfaction.

10. Business Recommendations

1. Optimise the Pizza Portfolio

Pizza Pro should prioritise its strongest-performing pizzas while reviewing weak products.

Actions

- Promote high-revenue Chicken pizzas: Thai Chicken, Barbecue Chicken, and California Chicken.
- Add “Best Seller” labels to top pizzas.
- Use top pizzas in bundle deals.
- Review underperforming pizzas such as Brie Carre, Green Garden, Spinach Pesto, Spinach Supreme, and Mediterranean.
- Test discounts or recipe changes before removing low performers.

Expected Business Value

- Higher revenue
- Better menu profitability
- Stronger product positioning
- Reduced waste from low-demand ingredients

2. Increase Average Order Value

The current average order value is about \$17. Increasing this even slightly could significantly improve revenue.

Actions

- Introduce meal deals.
- Offer add-ons at checkout.
- Promote sides, drinks, and desserts.
- Create “Buy 2 pizzas and save” offers.
- Offer family bundles during weekends.

Expected Business Value

- More revenue per transaction
- Improved profitability
- Stronger customer value
- Better use of existing customer traffic

3. Strengthen Customer Retention

The top customers spend over \$1,100, showing that Pizza Pro has loyal, high-value customers.

Actions

- Create a loyalty programme.
- Build VIP customer segments.
- Send personalised offers.
- Reward repeat purchases.
- Offer exclusive deals to top customers.

Expected Business Value

- Higher repeat purchases
- Improved customer loyalty
- Reduced dependence on new customer acquisition
- Increased customer lifetime value

4. Use Location-Based Marketing

Customer concentration is strongest in the East Coast, with additional clusters in California and the Midwest.

Actions

- Target high-density regions with loyalty campaigns.
- Target low-density regions with awareness promotions.
- Use state-level campaigns for high-revenue states.
- Promote best-selling pizzas in regions with lower sales.

Expected Business Value

- Better marketing efficiency
- Improved regional sales
- Stronger customer growth in underdeveloped areas
- More targeted promotional spending

5. Improve Peak-Time Operations

Orders are strongest around lunch hours and weekend evening periods.

Actions

- Increase staffing during 12 PM–1 PM.
- Prepare ingredients for top pizzas before peak periods.
- Improve delivery scheduling during busy hours.
- Use off-peak promotions to spread demand more evenly.
- Monitor order processing time during busy periods.

Expected Business Value

- Faster service
- Better customer satisfaction
- Reduced delays
- Improved operational efficiency

Conclusion

The Pizza Pro Analytics project shows how sales, customer, product, and location data can support better business decision-making. The business has strong overall performance, with \$824,320 revenue, 48,620 orders, and 1,000 customers. The analysis identifies clear product leaders, especially Chicken-based pizzas, while also highlighting underperforming products that need review.

The customer base is valuable and balanced, with opportunities for loyalty programmes, VIP segmentation, and location-based marketing. Operationally, the business should align staffing and stock planning with peak demand periods, especially lunchtime and weekend evenings.

Overall, Pizza Pro should promote top-performing pizzas, review and optimise weak products, increase average order value, retain high-value customers, and use regional and time-based strategies to improve sales performance.

By acting on these recommendations, Pizza Pro can improve revenue, customer retention, menu efficiency, and operational performance.
